MOHAMMED ATIF ALI NERANKI

Supply Chain Planner | Demand Planning · S&OP · SAP PP · Power BI

+91-9535760145 · atifalin09@gmail.com · linkedin.com/in/atifalin · github.com/Atifalin · atifalin.in

Bengaluru, India · Willing to relocate to Germany · Eligible for EU Blue Card sponsorship (Master's degree + qualified experience)

PROFILE

Supply chain planner with over 3 years of experience in demand planning, S&OP, and production scheduling in the Canadian pulp & paper industry (Kruger Inc.). Owned the monthly demand plan for 398,000+ tons of annual inventory (USD 318M+), acting as the interface between sales and the mill. Hands-on with SAP (PP master data, MRP, capacity planning), Power BI, SQL, and Python. Delivered ~7% MAPE at one-month horizon and reduced inventory holding costs by 12% through improved forecasting and automation. Led the build of a mill-wide Power BI platform — including an order-promising simulator used by sales — and sustained export delivery through the Vancouver port and Canadian rail strikes by re-routing via US ports. Canadian MBA. Currently consulting independently, with Kruger among the clients. Experienced in international, cross-functional, English-speaking environments; learning German (A1, targeting B1).

PROFESSIONAL EXPERIENCE

Founder & Automation Consultant — Ezypath (Udyam-registered), Bengaluru, India 02/2026 – present

- Build process-automation tools, AI-assisted internal tools, CRMs, and websites for small and mid-sized businesses.
- Retained by **Kruger Inc. — a former employer — as an external consultant on a four-month engagement**: led knowledge transfer of the planning function and **built reporting-automation tools for my successor**, so the reporting and forecasting cadence continued without me.
- Applying the same reporting-automation and data-pipeline skills used in planning, now directly for clients.

Production Planner — Kruger Inc., Kamloops, Canada 04/2023 – 01/2026

- Led the monthly S&OP cycle for a pulp mill: consolidated demand input from sales, challenged it against seasonality and operational constraints, and aligned demand, supply, production, and financial plans into one agreed plan for executive decision-making.
- Acted as the planning interface between sales and the mill, translating customer demand signals and order changes into an executable production and inventory plan.
- Managed 398,000+ tons of annual inventory (USD 318M+) across mill-managed (MMI) and distributor-managed (DMI) stock; met year-end inventory targets while exceeding sales targets by 10,000+ tons.
- Produced and published the weekly rolling forecast, tracking MAPE by horizon: **~3% at 15 days, ~7% at 1 month, ~11% at 2 months, ~21% at 3 months**; used the error profile to set safety stock and drive planning decisions rather than only to report them.
- Improved demand forecast accuracy via statistical demand-pattern analysis, using Python/pandas tooling to decompose forecast error and separate bias from variance; reported forecast accuracy, production conformance, and supply chain KPIs monthly to senior management.
- Built and maintained SAP master data (BOMs, routings, work centres) and capacity requirements plans; ran MRP and created production schedules balancing customer demand, inventory targets, and cost control.
- Safeguarded inventory integrity through regular audits and reconciliation, including production and scrap reporting.
- **Led the build of the mill-wide Power BI analytics platform (2025)** with a small project team, adopted across planning, sales, production and warehouse: executive views with 20+ interactive filters, sales-budget vs. production-budget gap analysis, daily/monthly/yearly production reporting, and inventory sliced by location, in-transit status, grade and sub-grade. Embedded in daily operational meetings and the twice-

weekly S&OP calls; reduced management decision cycles by 40%. Automated recurring reporting with SAP and Excel.

- **Built an order-promising simulation tool** within the platform, letting sales test prospective customer requirements against the live production plan and see immediately whether the volume could be absorbed and when it would be available — available-to-promise / capable-to-promise logic delivered without an advanced planning system.
- Ran scenario ("what-if") analyses for capacity planning and risk mitigation; identified bottlenecks and implemented process improvements to protect on-time delivery.
- **Sustained export delivery through major logistics disruptions** — including the Vancouver port strike and a Canadian rail strike — re-routing shipments via US ports and replanning production and delivery commitments around revised transit times, in daily coordination with carriers and freight forwarders.
- Coordinated daily with production, quality, warehouse, procurement, and sales in a continuous-process manufacturing environment.

> **Key results:** ~7% MAPE at one-month forecast horizon · –12% inventory holding costs through improved forecasting and process automation · –40% management decision cycle time · Recognized by senior leadership for driving digital transformation in planning.

Customer Service & Planning Representative — Kruger Inc., Kamloops, Canada 10/2022 – 03/2023

- Coordinated order processing, shipping schedules, and demand balancing between sales and the mill; promoted to Production Planner within 6 months.

Strategic Consultant (MBA Business Projects) — Kamloops Film Society & House of Carmond, Canada 03/2022 – 08/2022

- Delivered market research, gap analyses, and revenue-model recommendations presented to the Board of Directors.

Marketing Intern — Jindal Steelworks, India 12/2018 – 03/2019

- Supported production planning, inventory management, and logistics analysis at a high-volume steel plant; reduced process lag time through workflow improvements.

EDUCATION

Master of Business Administration (MBA) — Thompson Rivers University, Kamloops, Canada · GPA 3.74/4.33 2020 – 08/2022

Bachelor of Business Administration (BBA), Marketing — Bangalore University (AIMS Institute), India 2016 – 08/2019

SKILLS

Planning & SCM	Demand Planning & Forecasting, S&OP, Production Scheduling, Inventory Optimization (MMI/DMI), Capacity Planning, MRP, Master Data (BOMs, Routings, Work Centres), Scenario / What-If Analysis
ERP & BI	SAP ERP — PP (production planning, MRP, master data, capacity) and planning/reporting; Power BI, Advanced Excel (certified)
Data & Automation	SQL/PostgreSQL, Python (pandas — forecast error / MAPE analysis), process automation, KPI design & executive reporting
Software	TypeScript, React/React Native, REST APIs, Docker, GitHub Actions (CI/CD) — used in independent client projects

LANGUAGES

English	C2 — full professional proficiency (working language for 3.5 years in Canada)

German	A1 — actively learning, targeting B1
Hindi / Urdu	Native
Kannada	Native
